

Checklist of the Birds of Western Australia

Red-tailed Black Cockatoo feathers

R.E. Johnstone and J.C. Darnell

Collections and Research, Western Australian Museum, Kew Street, Welshpool, WA 6106

November 2020

The area covered by this Western Australian Checklist includes the seas and islands of the adjacent continental shelf, including Ashmore Reef. Refer to a separate checklist for Christmas Island and Cocos (Keeling) Islands. Criterion for inclusion of a species or subspecies on the list is, in most cases, supported by tangible evidence i.e. a museum specimen, an archived or published photograph or detailed description, video tape or sound recording.

Amendments to the previous checklist have been carried out with reference to both global and regional publications/checklists. The prime reference material for global coverage has been the International Ornithological Committee (IOC) World Bird List, *The Clements Checklist of Birds of the World*, the *Illustrated Checklist of the Birds of the World* Volume, 1 (Lynx Edicions, Barcelona), A Checklist of the Birds of Britain, 8th edition, the Checklist of North American Birds and, for regional coverage, *Zoological Catalogue of Australia* volume 37.2 (Columbidae to Coraciidae), *The Directory of Australian Birds*, Passerines and the Working List of Australian Birds (Birdlife Australia).

The advent of molecular investigation into avian taxonomy has required, and still requires, extensive and ongoing revision at all levels – family, generic and specific. This revision to the ‘Checklist of the Birds of Western Australia’ is a collation of the most recent information/research emanating from such studies, together with the inclusion of newly recorded species.

Due to the publication of research at differing intervals and the fact that these authors may hold varying opinions, delays of incorporating this new data into checklists will also vary. Where considered appropriate, these latest research findings have been included as has some pre-published material in order to make this checklist as up to date as possible.

From these comments, it can be seen that avian taxonomy is a ‘work in progress’ and that it is currently a long way from having a definitive world list. Overall, departures from the prime reference material in both global and regional lists (as above) have been minimised. Subject to the general consensus/opinion of other authors, the IOC comments have been accepted relating to the higher taxonomic levels and taxonomic status beyond Australia, but not where the Western Australian Museum collection material, distributional data base etc. shows otherwise.

Changes should only come when there is certainty and consensus and the Western Australian Museum’s objective is to maintain the status quo until claimed revisions have been thoroughly analysed and accepted e.g. Alström *et al.* 2018 made major reclassification of the grassbirds and allies.

A further element in this current revision to the ‘Checklist of the Birds of Western Australia’ is the number of additional species contained/recording. Increased public interest in ornithology combined with improved identification knowledge, the increasing number of “bird watchers” having high-technology photographic equipment, and more extensive field excursions (often to remote areas e.g. Ashmore Reef) all have contributed here. Whether all of these newly recorded species are in fact migratory “strays” which have been missed earlier, or whether other factors such as habitat destruction (along migratory routes) or climatic change is involved is of course unknown.

The aim of this checklist is to summarise all available data on systematics and taxonomy, provide brief explanations for changes, incorporate new higher-level classifications and recent new generic, specific and subspecific changes. Where necessary, reasons for departing from the current above-named checklists (IOC, Birds Australia etc.) are also given. Where there is doubt on the identification of a subspecies it is included in [] square brackets. An asterisk * denotes an introduced or naturalised species, not originally native.

We especially thank Kim Sarti for his development, layout and updating of this checklist document.

Class AVES**Order CASUARIIFORMES****Family CASUARIIDAE Emu**

Tadorna tadornoides (Jardine and Selby, 1828) Australian Shelduck (Mountain Duck)
Malacorhynchus membranaceus (Latham, 1802) Pink-eared Duck
Chenonetta jubata (Latham, 1802) Australian Wood Duck (Wood Duck, Maned Duck)
Nettapus pulchellus Gould, 1842 Green Pygmy Goose
⁹*Mareca penelope* (Linnaeus, 1758) Eurasian Wigeon
¹⁰*Anas querquedula* Linnaeus, 1758 Garganey

¹ Formerly in Dromaiidae. *D. n. rothschildi* is not accepted as a subspecies.

² The small northern ssp. *C. y. cervina* Gould is separable from other Australian populations.

³ Formerly in *Coturnix*.

⁴ *E. c. lineata* occurs in northern Australia, SE Asia and the Lesser Sundas. Subspecies *E. c. colletti* of Kimberley and Northern Territory poorly distinct and not recognised.

⁵ Common Pheasants introduced into Australia are of mixed hybrid stock.

⁶ Now relocated in monotypic family Anseranatidae, formerly in Anatidae.

⁷ *D. arcuata* is treated as monotypic with no subspecies.

⁸ Previously placed in the genus *Tadorna*.

⁹ Carnarvon 2013, De Grey River 2016. Formerly placed in the genus *Anas*.

¹⁰ Recent separation from genus *Anas* into *Spatula* is not followed here pending wider acceptance.

¹² Recent separation from genus *Anas* into *Spatula* is not followed here pending wider acceptance.

¹³ *A. superciliosa* is treated as monotypic with no subspecies.

¹⁴ Now treated as monotypic species following elevation of sub-Antarctic forms as full species.

¹⁵ Harding Dam 2019.

¹⁶ Ashmore Reef 2003. No specimens available. Sometimes treated as a ssp. of *C. indicus*.

¹⁷ Ashmore Reef 2006. Subspecies not identified and migratory and local Indonesian ssp. are possible vagrants.

¹⁸ The ssp. *leucogaster* is recognised for the north-eastern and southern Kimberley population (Johnstone and Storr 1998).

¹⁹ Reports of *Aerodramus* spp. from Kimberley, but no specimens available. Field identification for this group is problematic and possibly includes Himalayan Swiftlet, Mossy-nest Swiftlet, Black-nest Swiftlet and Edible-nest Swiftlet with the probable occurrence of at least one of these.

²⁰ Non-breeding migrant.

²¹ Timor Sea 1988 and Broome 1998. Currently expanding its range in Lesser Sundas, Indonesia (Johnstone *et al.* 2014). Sometimes treated as conspecific with the Little Swift *Apus affinis*.

Order OTIDIFORMES**Family OTIDIDAE Bustards**

²²*Ardeotis australis* (J.E. Gray, 1829) Australian Bustard

Order CUCULIFORMES**Family CUCULIDAE Cuckoos**

Chrysococcyx basalis (Horsfield, 1821) Horsfield's Bronze Cuckoo

Chrysococcyx osculans (Gould, 1847) Black-eared Cuckoo

Chrysococcyx lucidus (Gmelin, 1788) Shining Bronze Cuckoo

Chrysococcyx lucidus plagosus (Latham, 1802)

Chrysococcyx minutillus Gould, 1859 Little Bronze Cuckoo

Chrysococcyx minutillus minutillus Gould, 1859

Cacomantis pallidus (Latham, 1802) Pallid Cuckoo

Cacomantis flabelliformis (Latham, 1802) Fan-tailed Cuckoo

Cacomantis flabelliformis flabelliformis (Latham, 1802)

Cacomantis variolosus (Vigors and Horsfield, 1827) Brush Cuckoo

Cacomantis variolosus variolosus (Vigors and Horsfield, 1827)

Cuculus saturatus Blyth, 1843 Oriental Cuckoo

²⁶*Cuculus saturatus optatus* Gould, 1845 Horsfield's Cuckoo

Order COLUMBIFORMES**Family COLUMBIDAE Pigeons and doves**

^{27*}*Columba livia* Gmelin, 1789 Domestic Pigeon (Rock Dove)

^{28*}*Spilopelia chinensis* (Scopoli, 1786) Spotted Turtle Dove

^{29*}*Spilopelia chinensis tigrina* (Temminck, 1810)

^{30*}*Spilopelia senegalensis* (Linnaeus, 1766) Laughing Turtle Dove

**Spilopelia senegalensis senegalensis* (Linnaeus, 1766)

Chalcophaps indica (Linnaeus, 1758) Emerald Dove

³¹*Chalcophaps indica longirostris* Gould, 1848

Phaps chalcoptera (Latham, 1790) Common Bronzewing

³²*Phaps elegans* (Temminck, 1809) Brush Bronzewing

²² Previously merged with the genus *Otis*.

²³ Ashmore Reef 2005.

²⁴ The ssp. *melanurus* of northern and north-western Australia is not recognised.

²⁵ Recognised for Pilbara and Gascoyne populations; type locality Glenforrie Station 1921. This population is isolated from the Kimberley population and appears larger (Johnstone and Storr 2004).

²⁶ Sometimes treated as a full species *C. optatus*.

²⁷ Introduced in late 1800s.

²⁸ Formerly in *Streptopelia*.

²⁹ Specimens from Perth show characters of two subspecies: *S. c. chinensis* and *S. c. tigrina*.

³⁰ Formerly in *Streptopelia*.

³¹ *C. i. longirostris* treated by Rasmussen & Anderton (2005) as a full species. However, Johnstone *et al.* (2014) shows that *C. i. longirostris* intergrades with *C. i. indica* in eastern Indonesia and they should be treated as conspecific.

³² Validity of ssp. *occidentalis* from south-west Western Australia is doubtful. Its range is continuous across the Great Australian Bight and geographic variation between Western Australian and South Australian populations is slight.

<i>Phaps histrionica</i> (Gould, 1841)	Flock Bronzewing (Flock Pigeon)
³³ <i>Ocyphaps lophotes</i> (Temminck, 1822)	Crested Pigeon
³⁴ <i>Geophaps plumifera</i> Gould, 1842	Spinifex Pigeon
<i>Geophaps plumifera plumifera</i> Gould, 1842	
<i>Geophaps plumifera ferruginea</i> (Gould, 1865)	
<i>Geophaps smithii</i> (Jardine and Selby, 1830)	Partridge Pigeon
<i>Geophaps smithii smithii</i> (Jardine and Selby, 1830)	Partridge Pigeon (Eastern form)
<i>Geophaps smithii blaauwi</i> Mathews, 1912	Partridge Pigeon (Western form)
³⁵ <i>Petrophassa albipennis</i> Gould, 1841	White-quilled Rock Pigeon
<i>Geopelia cuneata</i> (Latham, 1802)	Diamond Dove
<i>Geopelia striata</i> (Linnaeus, 1766)	Zebra Dove
³⁶ <i>Geopelia striata placida</i> Gould, 1844	Peaceful Dove
³⁷ <i>Geopelia humeralis</i> (Temminck, 1821)	Bar-shouldered Dove
³⁸ <i>Caloenas nicobarica</i> (Linnaeus, 1758)	Nicobar Pigeon
<i>Ptilinopus regina</i> Swainson, 1825	Rose-crowned Fruit Dove
³⁹ <i>Ptilinopus regina xanthogaster</i> (Wagler, 1827)	Grey-capped Fruit Dove
<i>Ptilinopus regina ewingii</i> Gould, 1842	
<i>Ducula bicolor</i> (Scopoli, 1786)	Pied Imperial Pigeon
⁴⁰ <i>Ducula bicolor spilorrhoea</i> (G.R. Gray, 1858)	Torres Strait Pigeon (Torresian Imperial Pigeon)

Order GRUIFORMES

Family RALLIDAE Rails, crakes, waterhens and coots

<i>Crex crex</i> (Linnaeus, 1758)	Corncrake (Corn Crake)
<i>Lewinia pectoralis</i> (Temminck, 1831)	Lewin's Rail
⁴¹ <i>Lewinia pectoralis clelandi</i> (Mathews, 1911)	
⁴² <i>Gallirallus philippensis</i> (Linnaeus, 1766)	Buff-banded Rail
<i>Gallirallus philippensis mellori</i> (Mathews, 1912)	
<i>Eulabeornis castaneoventris</i> Gould, 1844	Chestnut Rail
<i>Eulabeornis castaneoventris castaneoventris</i> Gould, 1844	
⁴³ <i>Tribonyx ventralis</i> (Gould, 1837)	Black-tailed Nativehen
<i>Gallinula tenebrosa</i> Gould, 1846	Dusky Moorhen
<i>Gallinula tenebrosa tenebrosa</i> Gould, 1846	
<i>Fulica atra</i> Linnaeus, 1758	Eurasian Coot
<i>Fulica atra australis</i> Gould, 1845	
<i>Porphyrio porphyrio</i> (Linnaeus, 1758)	Purple Swamphen (Western Swamphen)
⁴⁴ <i>Porphyrio porphyrio melanotus</i> Temminck, 1820	
⁴⁵ <i>Porphyrio porphyrio bellus</i> Gould, 1841	

³³ Subspecies *O. l. whitlocki* is not recognised in this almost continually distributed species; geographic variation is slight and clinal.

³⁴ There is considerable geographic variation within this species with white-bellied, red-bellied and intermediate populations e.g. in Cape, Edgar and Grant ranges. These populations are probably best treated as polytopic subspecies. (Johnstone 1981, *Rec. West. Aust. Mus.* **9**: 49–64).

³⁵ Forming a superspecies with Chestnut-quilled Rock Pigeon *P. rufipennis* of Arnhem Land. Subspecies *P. a. boothi* is not recognised; it is the end of a cline in size and colouration.

³⁶ Only one ssp. *G. s. placida* recognised in Australia (Johnstone 1992, *West. Aust. Nat.* **19**(1)). It is sometimes treated as a full species.

³⁷ No ssp. recognised (Johnstone 1990, *Rec. West. Aust. Mus. Suppl.* **32**: 1–120).

³⁸ Timor Sea 1989.

³⁹ Ashmore Reef 2016.

⁴⁰ Sometimes treated as a full species *D. spilorrhoea*.

⁴¹ Possibly extinct, last report from south-western WA in 1932.

⁴² Sometimes placed in the genus *Hypotaenidia*.

⁴³ Sometimes placed in the genus *Gallinula*.

⁴⁴ Sometimes treated as a full species *P. melanotus*, but retained here as *P. p. melanotus*.

⁴⁵ Sometimes treated as a subspecies *P. melanotus*, but retained here as *P. p. bellus*.

<i>Porzana fluminea</i> Gould, 1843	Australian Spotted Crake (Australian Crake)
⁴⁶ <i>Porzana pusilla</i> (Pallas, 1776)	Baillon's Crake
<i>Porzana pusilla palustris</i> Gould, 1843	
⁴⁷ <i>Porzana tabuensis</i> (Gmelin, 1789)	Spotless Crake
⁴⁸ <i>Porzana cinerea</i> (Vieillot, 1819)	White-browed Crake
⁴⁹ <i>Rallina fasciata</i> (Raffles, 1822)	Red-legged Crake
⁵⁰ <i>Gallicrex cinerea</i> (Gmelin, 1789)	Watercock
<i>Amaurornis phoenicurus</i> (Pennant, 1769)	White-breasted Waterhen
⁵¹ <i>Amaurornis phoenicurus leucomelana</i> (S. Müller, 1842)	
<i>Amaurornis moluccana</i> (Wallace, 1865)	Bush-hen
<i>Amaurornis moluccana ruficrissa</i> (Gould, 1869)	Pale-vented Bush-hen

Family GRUIDAE Cranes

<i>Poliocephalus poliocephalus</i> (Jardine and Selby, 1827)	Hoary-headed Grebe
<i>Podiceps cristatus</i> (Linnaeus, 1758)	Great Crested Grebe
<i>Podiceps cristatus australis</i> Gould, 1844	

Order CHARADRIIFORMES**Family TURNICIDAE Buttonquails**

<i>Turnix maculosus</i> (Temminck, 1815)	Red-backed Buttonquail
<i>Turnix maculosus melanotus</i> (Gould, 1837)	
<i>Turnix castanotus</i> (Gould, 1840)	Chestnut-backed Buttonquail
<i>Turnix varius</i> (Latham, 1802)	Painted Buttonquail
<i>Turnix varius varius</i> (Latham, 1802)	
<i>Turnix varius scintillans</i> (Gould, 1845)	Abrolhos Painted Buttonquail
<i>Turnix pyrrhothorax</i> (Gould, 1841)	Red-chested Buttonquail
<i>Turnix velox</i> (Gould, 1841)	Little Buttonquail

Family BURHINIDAE Stone-curlews

<i>Burhinus grallarius</i> (Latham, 1802)	Bush Stone-curlew (Bush Thick-knee)
<i>Esacus magnirostris</i> (Vieillot, 1818)	Beach Stone-curlew (Beach Thick-knee)

Family HAEMATOPODIDAE Oystercatchers

<i>Haematopus longirostris</i> Vieillot, 1817	Pied Oystercatcher
<i>Haematopus fuliginosus</i> Gould, 1845	Sooty Oystercatcher
<i>Haematopus fuliginosus fuliginosus</i> Gould, 1845	
<i>Haematopus fuliginosus ophthalmicus</i> Castelnau and Ramsay, 1877	

⁴⁶ Sometimes placed in the genus *Zapornia*.⁴⁷ Sometimes placed in the genus *Zapornia*.⁴⁸ Sometimes placed in the monotypic genus *Poliolimnas*.⁴⁹ Broome 1958 and Whim Creek 2007.⁵⁰ Ashmore Reef 2012.⁵¹ Ashmore Reef 2003.⁵² Sometimes placed in the genus *Antigone*.⁵³ Sometimes placed in the genus *Antigone*.⁵⁴ Sometimes treated as a full species *T. tricolor*.

Family RECURVIROSTRIDAE Stilts and avocets

<i>Himantopus himantopus</i> (Linnaeus, 1758)	Black-winged Stilt
55 <i>Himantopus himantopus leucocephalus</i> Gould, 1837	Pied Stilt (White-headed Stilt)
<i>Cladorhynchus leucocephalus</i> (Vieillot, 1816)	Banded Stilt
<i>Recurvirostra novaehollandiae</i> Vieillot, 1816	Red-necked Avocet

Family CHARADRIIDAE Plovers, dotterels and lapwings

<i>Vanellus tricolor</i> (Vieillot, 1818)	Banded Lapwing
<i>Vanellus miles</i> (Boddaert, 1783)	Masked Lapwing

²¹⁰ Sometimes treated as a full species *T. delicatula*.

²¹¹ Between Barrow I. and mainland 2013. Most likely ssp. *stictonotus*.

²¹² Most of this species variation in size and colouration is clinal and, as such, the recognition of *addenda* in the south-west and *occidentalis* in north Western Australia is not warranted.

²¹³ Only one ssp. in Western Australia is recognised. *N. b. ocellata* is treated as a synonym of *N. b. boobook*.

²¹⁵ North Burracoppin 2005.

²¹⁶ One record, a bird photographed on Jabiru Venture, Timor Sea, April 1990.

²¹⁷ Ashmore Reef sight records probably refer to this subspecies.

²¹⁸ Sometimes treated as a full species *T. sordidus* Torresian Kingfisher.

²¹⁹ Sometimes placed in the genus *Alcedo*.

²²⁰ Scott Reef - Rowley Shoals 1997. South Lake 2016. Most likely the nominate subspecies.

²²¹ Geographic variation in this continuously distributed species is slight and clinal; ssp. *murchisonianus* is not recognised.

²²² This species is semi-nomadic with continuous distribution; the various colour forms can only be grouped in arbitrary fashion and therefore only one ssp. recognised for Australia.

²²³ No specimens examined.

²²⁷ Contra White *et al.* 2011; Dickinson & Remsen 2013 and Birdlife Australia, *Zanda* is retained as a subgenus of *Calyptorhynchus* with the patronym Carnaby's Cockatoo.

²²⁸ Type locality for the Galah remains an enigma; described by Vieillot (1817) as *Cacatua roseicapilla* from a specimen collected during Baudin Expedition 1800–1803 labelled 'dans les Indes'. Mathews (1912) *Novit. Zool.* 18: determined this location to be New South Wales, however Schodde (1988) *Canberra Bird Notes* 13:4 believed the type to be probably from Western Australia, Shark Bay area. Recent evidence confirms that a specimen was collected by the Baudin Expedition in Shark Bay in August/September 1801, thus the nominate ssp. is now assigned to populations south of the Kimberley and ssp. *albiceps* for northern and eastern Australia; ssp. *kuhli* is not recognised. Sometimes placed in the genus *Eolophus*.

²²⁹ Sometimes placed in the genus *Lophochroa*. Subspecies taxonomic status requires confirmation.

²³⁰ The provenance and subspecific identity of the type specimen of *Licmetis tenuirostris derbyi* Mathews 1916, are in doubt (most probably an immature *C. p. pastinator*) and until resolved the most appropriate name for the mid Western Australian (wheatbelt) population is *Cacatua pastinator butleri* Ford 1987.

²³¹ Small colonies established in southwest of Western Australia since 1955.

²³² The type locality for the Regent Parrot is uncertain and the type specimens appear to have been lost. The names *Palaeornis anthopeplus* Lear 1831 and *P. melanura* Lear 1932 were based on a female and male respectively, published on plates in his *Illustrations of the Family Psittacidae, or Parrots* 1830–1832, without description or source. Mathews (1912) presumed the type locality was New South Wales and named *Polytelis anthopeplus westralis* from southwest Australia. Schodde 1993 (*Bull. Br. Ornithol. Club* **113**: 44–47) noted that Lear's plate matched best with the western form and designated a neotype from Bolgart, Western Australia and provided the name *P. a. monarchoides* for the eastern Australian populations. Mees 2004 (*Zool. Med. Leiden* **78**(10) 27 viii 2004: 205–208) on the other hand, argued that Schodde's action was invalid and that the type locality should remain as New South Wales.

²³³ Forming a superspecies with *A. jonquillaceus* of Wetar and Timor.

²³⁴ Aviary escapees.

²³⁵ Sometimes placed in the genus *Northiella*.

²³⁶ Sometimes placed in the genus *Psephotellus*.

²³⁷ The sole member of the subgenus *Purpureicephalus*. See Johnstone and Benken (2009) for hybridisation with *P. zonarius*.

²³⁸ Distribution is continuous between Western Australia and Northern Territory populations; variation is slight and clinal (across Joseph Bonaparte Gulf region) and thus inadequate for recognition of subspecies *hilli*.

²³⁹ The sole member of the subgenus *Barnardiuss*.

²⁴⁰ Known to occasionally hybridise with *P. spurius* on the Swan Coastal Plain.

²⁴¹ Sometimes treated as a full species.

²⁴² Sometimes placed in the genus *Neopsephotus*.

²⁴³ The ssp. *zietzi* from coastal South Australia is at best very weakly defined.

272 Following LeCroy (2011).

273 Forming a superspecies with *M. dammermani*, *M. kuehni* and possibly *M. vulnerata*, all of the Lesser Sundas.274 Only one ssp. recognised for mainland Australia. Geographic variation in this continuously distributed species is clinal, with the nominate subspecies intergrading with *sordidus* over most of north Queensland. While some of the variation is undoubtedly geographic, it hardly amounts to subspeciation.

²⁷⁵ Comprising with the White-cheeked Honeyeater *P. niger*, the subgenus *Meliornis*.

²⁷⁶ Indonesian Honeyeater *L. i. limbata* treated as the Wallacean ssp. of the Brown Honeyeater.

²⁷⁷ Sometimes placed in genus *Entomyzon*, but retained here in *Melithreptus* based on morphology, behaviour and eggs.

²⁷⁸ Forming a superspecies with *M. lunatus* and *M. affinis* of eastern Australia (Johnstone and Storr 2004).

²⁷⁹ Previously placed in the genus *Phylidonyris*.

²⁸⁰ Sometimes placed in the genus *Nesoptilotis*.

²⁸¹ Previously treated as a subspecies of *Meliphaga albilineata*.

²⁸² Forming a superspecies with the Mangrove Honeyeater *L. versicolor* of eastern Australia and New Guinea.

²⁸³ Only the nominate ssp. recognised in Western Australia with a broad cline between southern *virescens* and northern "forresti" forms.

²⁸⁴ Northern Australian populations sometimes treated as a separate ssp. "planasi".

²⁸⁵ The ssp. *carteri* is recognised for the isolated mid-western population, however, there is a number of other disjunct populations in WA (Johnstone and Storr 2004). Those in south-west Kimberley differ only slightly from northern *carteri* and the name "calconi" could be used for them, whereas north-eastern WA populations are merely the northern end of a north-south cline beginning in eastern Australia.

²⁸⁶ The eastern and western populations of *Anthochaera chrysoptera* (*chrysoptera* and *lunulata* respectively) were previously treated as conspecific.

Gerygone magnirostris magnirostris Gould, 1843

²⁸⁷ Schodde and Mason (1999) recognised three ssp. in WA. The gradation from dark southern *M. f. "obscura"* type birds to paler *M. f. "wayensis"* is a smooth cline and thus inadequate for recognition of subspecies (Johnstone and Storr 2004).

²⁸⁸ Tentatively treated as conspecific with *P. punctatus* based on evidence of hybridisation in southeast Australia (Schodde and Mason 1999), but little or no evidence of hybridisation in WA (Johnstone and Storr 2004).

²⁸⁹ For subspecies recognition see Johnstone and Storr 2004.

²⁹⁰ Subspecies *murchisoni* and *westralsiensis* recognised (Johnstone and Storr 2004).

²⁹¹ Subspecies *westralsiensis* recognised for populations breeding in south-west of Western Australia (Johnstone and Storr 2004).

²⁹² Not unexpectedly this sedentary bird undergoes some geographic variation throughout its immense range, but this hardly amounts to subspeciation.

²⁹³ Schodde and Mason (1999) separated the southwestern population as a distinct species, the Western Fieldwren. Its distribution is continuous in WA (Johnstone and Storr 2004) and there is a smooth cline in variation between the southern olive and northern rufous forms; furthermore, the calls are identical. Previously treated as a subspecies of Striated Fieldwren *C. fuliginosus*.

²⁹⁴ Previously and sometimes currently in the genus *Hylacola*.

²⁹⁵ Tentatively recognised, but taxonomic status requires confirmation.

²⁹⁶ Retained as conspecific with *S. frontalis*. White-bellied populations in south-east of WA sometimes treated as separate subspecies '*S. f. mellori*', but there are no steps in this cline sufficiently abrupt to delimit subspecies.

²⁹⁷ Closely related to the Western Gerygone and possibly only a well-marked subspecies.

²⁹⁸ Variation in WA populations is clinal and thus inadequate for recognition of subspecies (Johnstone and Storr 2004).

²⁹⁹ Geographic variation in WA populations is clinal without steps and inadequate for recognition of subspecies (Johnstone and Storr 2004).

³⁰⁰ Forming a superspecies with the Brown Throtnbill *A. pusilla* of Tasmania and wetterparts of eastern Australia.

³⁰¹ Only the nominate form recognised in Western Australia with a broad cline between southern nominate and northern "whitlocki" forms.

³⁰² Only the nominate ssp. recognised in Western Australia.

³⁰³ Subspecies *leucopsis* and *castaneiventris* intergrade in a narrow zone through the Gibson Desert in Western Australia (Johnstone and Storr 2004).

³⁰⁴ A number of ssp. have been proposed for this species including "ashbyi" and "centralis" in Western Australia (Shodde and Mason 1999), but their descriptions are unconvincing, geographic variation is clinal and the distribution map is erroneous.

³⁰⁵ Treated as conspecific with Eastern Whippbird.

³⁰⁶ *P. n. oberon* is not recognised (Johnstone and Storr 2004).

³⁰⁷ Formerly *C. castanotum clarum*.

³⁰⁹ There is little firm evidence that the type came from opposite the Archipelago of the Recherche in south-west Australia, but far more likely from Timor (Peters 1962 and contra Mees 1968; Schodde and Mason 1999).

³¹⁰ The differences between eastern nominate "cyanopterus" and western "perthii" are extremely slight and insufficient to warrant recognition of subspecies.

³¹¹ Distribution in WA is disjunct with isolates in the Cape Range region and on islands, nevertheless no subspecies are recognised (Johnstone and Storr 2004).

³¹² Sometimes placed in monotypic genus *Melloria*.

³¹³ Sometimes placed in the genus *Gymnorhina*, but included here in *Cracticus*; *Gymnorhina* is treated as a subgenus. Only two ssp. are recognised - *C. t. tibicen* of northern two-thirds of WA and *C. t. dorsalis* of south-western WA (Johnstone and Storr 2004).

³¹⁴ Formerly treated as a ssp. of *C. torquatus* (see Schodde and Mason 1999 and Kearns *et al.* 2014).

³¹⁵ Ford (1979 and 1987) treats Port Essington in the Northern Territory as the type locality of *C. argenteus* and thus *C. a. latens* Ford (1979) is used for the Kimberley population.

³¹⁶ Although northern birds are much smaller than those from the far south, the distribution is virtually continuous, size changes clinally suggesting that the distribution of ssp. 'picatus' would be difficult to define and therefore not recognised.

³¹⁷ The supposed differences between nominate *novaehollandiae* from Tasmania and mainland *melanops* require further confirmation as there appears to be considerable overlap in measurements.

³¹⁸ Sometimes placed in the genus *Edolisoma*.

³¹⁹ Forming a superspecies with *L. sueuri* of Indonesia.

³²⁰ The Kimberley population was described as a separate subspecies *L. l. macrura* by Schodde (1989) and although there is some overlap in length of wing and tail between Kimberley and Northern Territory populations, the two forms are separated by dry country at the head of Joseph Bonaparte Gulf and further work is needed to clarify its status.

³²¹ Variation is clinal towards north and interior of WA with birds becoming smaller and paler. Mayr (1953) and Schodde and Mason (1999) recognised a pale northern and central Australian "pallescens" which is merely the northern end of this north-south cline. The change from typical "gutturalis" birds to "pallescens" is so gradual that it is impossible to draw a line between the two subspecies.

³²² Sometimes treated as a full species.

³²³ Sometimes treated as a full species.

³²⁴ Contra Schodde and Mason (1999), distribution is accurately mapped in Johnstone and Storr (2004).

³²⁵ Formerly *P. pectoralis fuliginosa* Golden Whistler (Joseph *et al.* 2014).

³²⁶ Nominate ssp. *melanura* ranges from Exmouth Gulf to Port Warrender and *spinicaudus* from Cambridge Gulf to Mackay, Queensland (including islands in Torres Strait).

³²⁷ The geographic variation of this continuously distributed species is clinal; the ssp. "*falcata*" of northern Australia is not recognised (Johnstone and Storr 2004).

³²⁸ Disjunct populations occur in WA, however, there is no concordance of characters used to separate these into ssp. "*lanioides*", "*carnarvoni*" and "*fretorum*". As such, no subspecies are recognised (Johnstone 1990).

³²⁹ Contra Schodde and Mason (1999), distribution is accurately mapped in Johnstone and Storr (2004).

³³⁰ Subspecies *kolichisi* Ford 1987 differs in being considerably smaller in all dimensions.

³³⁴ The recognition of northern ssp. "baileyi" on the grounds of its larger size is perplexing as measurements show it is smaller than nominate *bracteatus*, and there appears to be considerable overlap in size between northern and southern birds.

³³⁵ Only the nominate form *R. l. leucophrys* is recognised for mainland Australia (Mees 1961).

³³⁶ Previously treated as ssp. of the New Zealand Fantail *R. fuliginosa*. Distribution of ssp. in WA mapped in Johnstone and Storr 2004.

³³⁷ Winter visitor.

³³⁸ Forming a superspecies with the Grey Fantail and possibly the White-tailed Fantail.

³³⁹ Most recently treated as a ssp. of the Rufous Fantail *R. rufifrons*. However, *rufifrons* and *dryas* do not intergrade in north Queensland and are treated here as allospecies in a view for their marked differences in habitat and morphology. Both *R. dryas* and *R. rufifrons* forming a superspecies with several east Indonesian species.

³⁴⁰ Distribution is continuous both north-south and east-west. No ssp. recognised in WA.

³⁴¹ Sometimes treated as a full species, but retained here as ssp. (refer Andersen *et al.* 2015)

³⁴² No specimens examined; subspecies unknown. Probably ship-assisted.

³⁴³ Sometimes placed in the monotypic genus *Quoyornis* as *Q. georgianus*.

³⁴⁴ Sometimes treated as a full species *E. griseogularis*. Ford (1979) treated the western and eastern forms of the Yellow Robin as conspecific. The ssp. "rosinae" is not recognised as variation is clinal and it is impossible to draw a line between the two races.

³⁴⁵ No ssp. are recognised in Western Australia. Subspecies "picata" in the north i.e. Kimberley and "westralensis" in the south are merely the ends of a north-south cline in increasing size (Johnstone and Storr 2004). The Melville Island population (*M. c. melvillensis*) may be taxonomically distinguishable in which case the mainland population would be treated as the nominate form.

³⁴⁶ Previously placed in the genus *Eopsaltria* or *Peneoenanthe*. Only one subspecies recognised in Australia (Mees 1982; Ford 1983 and Johnstone 1990).

³⁴⁷ Sometimes treated as a ssp. of *P. superciliosa*.

³⁴⁸ The north-western Australian population in Kimberley, northern Northern Territory and western Queensland is sometimes treated as separate subspecies "pallida".

³⁴⁹ Australian populations now separated from Pacific populations *P. multicolor* as a separate species *P. boodang* (Shodde and Mason 1999).

³⁵⁰ In Western Australia intergradation of colour morphs is complete between one local variant and another (birds varying locally according to colour of soil substrate). All Australian populations are best treated as components of a single variable ssp. (Johnstone and Storr 2004).

Family LOCUSTELLIDAE Grass warblers and grassbirds

³⁶⁷ <i>Helopsaltes fasciolatus</i> (Gray, 1861)	Gray's Grasshopper Warbler (Gray's Warbler)
³⁶⁸ <i>Helopsaltes certhiola</i> (Pallas, 1811)	Pallas's Grasshopper Warbler
³⁶⁹ <i>Helopsaltes ochotensis</i> (Middendorff, 1853)	Middendorff's Grasshopper Warbler
³⁷⁰ <i>Poodytes carteri</i> (North, 1900)	Spinifexbird

³⁵² Non-breeding migrant.

³⁵³ Non-breeding migrant.

³⁵⁴ No specimens available, but ssp. almost certainly *javanica*.

³⁵⁵ Tentatively recognised on measurements, but range is continuous between eastern and western populations in southern Australia and variation possibly clinal.

³⁵⁶ Non-breeding migrant. Sometimes placed in the genus *Hirundo*.

³⁵⁷ Sometimes placed in the genus *Hirundo*.

³⁵⁸ Sometimes placed in the genus *Hirundo*.

³⁵⁹ Sometimes placed in the genus *Hirundo*. Australian and Timor populations treated under the nominate form contra Gill and Donsker (2013, 2019).

³⁶⁰ Ashmore Reef 2012. Photographs only.

³⁶¹ Ashmore Reef 2011.

³⁶² Ashmore Reef 2013. No specimens, but most likely ssp. *yakutensis* of eastern Siberia.

* <i>Turdus merula merula</i> Linnaeus, 1758	
³⁸² <i>Turdus obscurus</i> Gmelin, 1789	Eyebrowed Thrush

³⁷¹ Numerous disjunct populations in WA, ssp. "thomasi" of south Western Australia is not recognised (Johnstone and Storr 2004).

³⁷² Sometimes placed in the genus *Megalurus*.

³⁷³ Sometimes placed in the genus *Megalurus*.

³⁷⁴ The few Kimberley specimens match *fuscicapilla* of the eastern Lesser Sundas.

³⁷⁵ Only one ssp. *lineocapilla* is recognised for Western Australia and the Northern Territory.

³⁷⁶ Ashmore Reef. No specimens, but ssp. most likely to be nominate.

³⁷⁷ Distribution in WA is disjunct, but variation largely clinal. No subspecies are recognised (Johnstone 1990 and Ford 1983).

³⁷⁸ Previously known as ssp. *gouldi*, but *chloronotus* has priority.

³⁷⁹ Possibly ship-assisted.

³⁸⁰ Ashmore Reef 2011.

³⁸¹ Esperance 2011 and Ashmore Reef 2012.

³⁸² Port Hedland 2014; Beverley Springs (Kimberley) January 2020.

Family MUSCICAPIDAE Old World flycatchers

³⁸³ <i>Muscicapa griseisticta</i> (Swinhoe, 1861)	Grey-streaked Flycatcher
<i>Muscicapa sibirica</i> Gmelin, 1789	Dark-sided Flycatcher
³⁸⁴ <i>Muscicapa sibirica [sibirica]</i> Gmelin, 1789	
<i>Muscicapa dauurica</i> Pallas, 1811	Asian Brown Flycatcher

<i>Neochmia ruficauda clarescens</i> (Hartert, 1899)	
<i>Emblema pictum</i> Gould, 1842	Painted Finch
³⁹¹ <i>Taeniopygia bichenovii</i> (Vigors and Horsfield, 1827)	Double-barred Finch
<i>Taeniopygia bichenovii annulosa</i> (Gould, 1840)	
<i>Taeniopygia guttata</i> (Vieillot, 1817)	Zebra Finch
<i>Taeniopygia guttata castanotis</i> (Gould, 1837)	

³⁸³ Ashmore Reef 2010.

³⁸⁴ No specimens examined, but most likely ssp. the nominate form.

³⁸⁵ Ashmore Reef 2005. No specimens examined, but most likely ssp. the nominate form.

³⁸⁶ Ashmore Reef 2012. Photographs only.

³⁸⁷ Mainly ship-assisted vagrants.

³⁸⁸ Mainly ship-assisted vagrants.

³⁸⁹ Established in northern Darling Range in 1950-60.

³⁹⁰ Sometimes separated into monotypic genus Bathilda. Western Australian, Northern Territory and Cape York populations treated as a single ssp. *clarescens* (Ford 1986).

³⁹¹ Sometimes separated into the monotypic genus *Stizoptera*.

<i>Poephila personata</i> Gould, 1842	Masked Finch
<i>Poephila personata personata</i> Gould, 1842	
³⁹² <i>Poephila acuticauda</i> (Gould, 1840)	Long-tailed Finch
<i>Lonchura punctulata</i> (Linnaeus, 1758)	Scaly-breasted Munia
<i>Lonchura pallida</i> (Wallace, 1864)	Pale-headed Munia
<i>Lonchura flaviprymna</i> (Gould, 1845)	Yellow-rumped Mannikin
<i>Lonchura castaneothorax</i> (Gould, 1837)	Chestnut-breasted Mannikin
<i>Lonchura castaneothorax castaneothorax</i> (Gould, 1837)	
³⁹³ <i>Chloebia gouldiae</i> (Gould, 1844)	Gouldian Finch
Family MOTACILLIDAE Wagtails and pipits	
³⁹⁴ <i>Motacilla flava</i> Linnaeus, 1758	Yellow Wagtail
³⁹⁵ <i>Motacilla flava plexa</i> (Thayer and Bangs, 1914)	
³⁹⁶ <i>Motacilla flava simillima</i> Hartert, 1905	
³⁹⁷ <i>Motacilla flava macronyx</i> (Stresemann, 1920)	
³⁹⁸ <i>Motacilla flava taivana</i> (Swinhoe, 1863)	Green-headed Yellow Wagtail
³⁹⁹ <i>Motacilla cinerea</i> Tunstall, 1771	Grey Wagtail
⁴⁰⁰ <i>Motacilla cinerea cinerea</i> Tunstall, 1771	
<i>Motacilla alba</i> Linnaeus, 1758	White Wagtail
<i>Motacilla alba ocularis</i> Swinhoe, 1860	
<i>Motacilla alba lugens</i> Gloger, 1829	
<i>Motacilla alba leucopsis</i> Gould, 1838	
⁴⁰¹ <i>Anthus australis</i> Vieillot, 1818	Australian Pipit
<i>Anthus australis australis</i> Vieillot, 1818	
⁴⁰² <i>Anthus gustavi</i> Swinhoe, 1863	Pechora Pipit
<i>Anthus cervinus</i> (Pallas, 1811)	Red-throated Pipit
Family FRINGILLIDAE True finches	
^{403*} <i>Carduelis carduelis</i> (Linnaeus, 1758)	European Goldfinch
* <i>Carduelis carduelis [britannica]</i> (Hartert, 1903)	

³⁹² Subspecies "hecki" of Northern Territory is doubtfully distinct (Johnstone and Storr 2004).

³⁹³ Monotypic *Chloebia* is resurrected for Gouldian Finch which is deeply divergent from *Erythrura* (Olsson & Alström 2020).

³⁹⁴ Sometimes Yellow Wagtail treated as two taxa - Eastern and Western Yellow Wagtail, but retained here as a single species *M. flava*.

³⁹⁵ Non-breeding migrant.

³⁹⁶ Non-breeding migrant. *M. f. simillima* herein considered distinct from *M. f. tschutschensis*.

³⁹⁷ Non-breeding migrant.

³⁹⁸ Non-breeding migrant.

³⁹⁹ Non-breeding migrant.

⁴⁰⁰ *M. c. robusta* synonymised with *M. c. cinerea*.

⁴⁰¹ Previously included in the superspecies *Anthus novaeseelandiae* (Gemlin 1789). All Australian mainland populations treated as *A. a. australis*.

⁴⁰² No specimens examined, but the nominate form the most likely ssp.

⁴⁰³ Known only from aviary escapees. Some recent records of large flocks on Swan Coastal Plain indicate that at times escapees can establish colonies.
